Ok, thanks. It seems to be a good idea to double check since he seems to make a lot of products. We aren't interested in Nike Grind either. I asked about that, too, after we talked to Beaverton.

Thank you, Ksenija!

My understanding from talking to [REDACTED] is that the [REDACTED] location makes regular tire crumb. I sent an email to confirm, but that was my original question to him before I started the tour planning.. I suppose we could have misunderstood each other if I had said crumb rubber, instead of tire crumb, and he responded about nikegrind or rubber from a source other than tires, so it doesn't hurt to check. While I wait for his confirmation, this seems to suggest that they do make tire crumb. [REDACTED]

Subject: Updates on tire crumb

I have a few updates from Annette and Kent:

- They would like us to ask, during the course of our visits or discussions, if the processing companies would be willing to allow us to take samples, and if so, who the company contact is so we can follow up with specifics. I think they are ready to move ahead and try to nail down some facilities that would be willing to allow us to collect samples.

We could also check with the other large facilities on this as well. I think we need to be careful until May 2, but if during your calls, it is a natural part of the discussion, go ahead and pose the question. If they seem willing, we can follow up later to get a firm response. And after May 2, we can just directly ask and try to get a final list of sites for the new material collection. The collection of the new material would occur in the June to July timeframe.

- For the study, we will not sample or look at the EPDM material. So, I probably won't go on that part of the [redacted] tour. But do we know if the [redacted] location makes the regular tire crumb? If so, that would be a good one to see and to ask.

- If [redacted] works out, we can also ask them the same questions on sampling.

- For [redacted] Ex. 6 Personal Privacy (PP) , we can ask if they could facilitate contacts for fields, preferably municipality or community fields, where we can sample. The actual approval would have to come from the field owners themselves, but the companies might be willing to work with us to get contacts. Ideally, ORD would like aged fields (2 years old or more) and really wants to include indoor fields.

I hope this is clear. If not, we can talk next week. Thanks for all of your help.
